## Smart Terminal-Management

WWW.CCV.EU

### CCVStore - More than a B2B App-Store

With the CCVStore, CCV is starting the path to the new, android-based payment generation. Via the CCVStore, which is operated and hosted by CCV, developers, for example, get direct access with their apps to the android-based terminals both at the served POS and in the unattended segment (e.g. vending, parking, EV charging).

The variety and functionality as well as the direct relation of the apps to the retail or the user make the overall solution a real POS all-rounder in only one device, very similar to your own smartphone.

The CCVStore (corresponds to the well-known AppStore) offers targeted business applications for trade and commerce. These can be payment and checkout applications, but also solutions from the areas of bonus and loyalty systems, customer evaluation/satisfaction, but also shift plans. In the unattended payment segment, i.e. at the vending machine, not only applications such as the blocking function („virtual key“) of the vending machine or live video support are conceivable, but also apps aimed at the end user: for example, special offers in the form of betting games could also be offered as time bridges during waiting times („smile for discount“). There are no limits to creativity here!

For developers, this creates the opportunity to build up an additional sales channel for their solutions and to offer their apps to retailers and other businesses on professional CCV payment hardware. In addition, there is also the option to operate your own client CCVStore. As a CCVStore client, the app portfolio offered can be individually adapted to the needs of your target group after approval by CCV.

And the CCVStore can do even more: In addition to app management, the CCVStore also has numerous terminal management functions that can be called up and used via the browser-based and clearly arranged back office. This includes terminal, update and rights management as well as a remote function for remote maintenance and communication with Android terminals.

# Android-Terminals & CCVSTORE

*The perfect duo for you business*

## CCV IM30

The brand new vending machine terminal is located in the unattended POS segment so far unique with PayDroid as operating system.

The 5" large colour touch display, Bluetooth (with beacon), camera and a proximity sensor support the usability of the CCV IM30. Of course on board: chip, magnetic strip and contactless reader for cashless payment.

The CCV IM30 is unique due to its features especially for the vending, public transport and eMobility sectors.

## CCV Mobile A920

The CCV Mobile A920 convinces with its added value thanks to smartphone-like functionality on PayDroid base. Apps can be easily and quickly installed and used from the CCVStore.

The smart payment terminal with the 5" color touch display - included integrated printer, scanner, cameras and long-life battery - for mobile applications, e.g. in the retail trade, in delivery services, in event area or in the gastronomy.
