

COMMUNITY OCPI Payment Terminal

Integrated payment solution for a seamless integration

Enable seamless credit card payment in be.ENERGISED

With rising demand and new legislation requiring EV drivers to pay directly with a credit card at charging stations, ChargePoint developed a backend integration to the payment terminal provider CCV, designed for be.ENERGISED and be.ENERGISED Monitoring.

As a site operator of any size, you can now expand your payment options. You can offer visitors the convenience of card payments while ensuring a scalable and transparent system that keeps you ahead of the curve.

We manage all AFIR and payment processes, streamlining integration with your business operations. Our solution eliminates the hassle, making it effortless and stress-free for your customers to enjoy direct payments.

Request your personalised offer now!

If you'd like to help lead the charge in the e-mobility movement, please get in touch.
